Battery Metals Report 2019 - Update: New and relevant information for download

Herisau, 08 May 2019: The electric (mobility) boom can no longer be stopped. However, nothing works without intelligent storage systems. The necessary metals lithium, cobalt, nickel and vanadium are scarce and difficult to extract. The update of the Battery Metals Report 2019 provides the latest information on demand, price development and investment opportunities for the most important battery metals lithium, cobalt, nickel and vanadium.

Raw materials are indispensable for the development of industry and technology worldwide, which makes them a sought-after commodity. The mining and raw materials experts at Swiss Resource Capital AG regularly prepare special reports on the precious metals gold, silver, platinum and palladium, the battery metals lithium, cobalt, nickel and vanadium as well as on the raw material that makes the only emission-free and at the same time base load-capable source of power generation possible: uranium.

Currently the new Battery Metals Report 2019 is available for free download: <https://www.resource-capital.ch/de/reports/ansicht/battery-metals-report-2019-1/>. It contains comprehensive information on the properties, use and promotion of the most important battery metals and also outlines future prospects: Lithium, cobalt and nickel are indispensable for the manufacture of lithium-ion batteries, without which no electric vehicle can move from one place to another. Vanadium finds its way into decentralised storage facilities with which excess energy from non-base load capable, regenerative energy sources such as wind or photovoltaic plants can be stored, thus making them capable of a piece-wide base load.

In addition, the report provides insightful interviews with exclusively selected experts from the industry. The presentation of a number of interesting companies that are suitable for speculation on rising battery metal prices completes the report.

All special reports can be found here:

About Swiss Resource Capital AG

Swiss Resource Capital AG, based in Herisau, Switzerland, is one of Europe's leading communication agencies for commodity companies and focuses on the German-speaking region. In addition to the special reports, SRC AG, as the world's leading provider, also offers self-produced contributions in commodity TV and raw material TV.

The complete offer is to be found on-line under www.resource-capital.ch, the TV contributions under <https://www.resource-capital.ch/en/mediathek/videos/> as well as all special reports under <https://www.resource-capital.ch/en/reports/>.
